### HIGH PRESSURE CLEANER POWXG9100

The POWXG9100 pressure washer gets even the toughest jobs done, thanks to its powerful 210cc petrol engine. The four-stroke engine provides up to 5100W of cleaning power. A water flow rate of 540 litres per hour and a peak pressure of up to 270 bar ensure a clean result time after time. Thanks to the four-stroke motor's easy-start mechanism, it starts effortlessly while relieving the user's arm. The economic engine has also a low fuel consumption.

It is the ideal cleaning tool for the most demanding tasks. Cleaning with warm water is possible, as the pressure washer can withstand temperatures of up to 50°C. The integrated detergent tank ensures the cleanest results.

The POWXG9100 is equipped with a high-quality copper pump. This ensures a better performance and prolongs the washer's lifetime. The device can be connected to a regular faucet, but it is also equipped with a suction mode. When using this mode, the 2 metre long hose can be used to pump up water from buckets, ponds and wells.

Thanks to the bypass system, the pressure washer is a safe to use cleaning tool. When the pressure washer's trigger is released, the water will be sent through a separate bypass circuit. There it gets pumped around at a constant pressure of 10 bar. This prevents the pressure washer's pump head from bursting because of overpressure and the motor from cutting out each time the trigger is released.

Because of its 3 litre petrol tank, there is no need for annoying extension cords. The 8 metre long water hose provides the needed freedom of movement. Additionally, the pressure washer is mounted on a robust undercarriage with two sturdy wheels, so it can be transported easily.
