

HITSAUSSPRAY

Maston Welding Spray is a high-grade silicone-free welding spray. Keeps welding splashes from sticking to the nozzle and work piece. Also effectively prevents blockage of the welding nozzle. The environmentally friendly Maston Welding Spray saves time and money by making it easier to remove welding splashes and allowing for surface treatments to be carried out immediately after welding. Instructions: Spray onto object under treatment before welding. Repeat regularly as work progresses. Never spray onto open flame or onto pieces whose temperature exceeds +450 °C. We recommend cleaning work pieces with Maston Degreasing Agent.
